SUMMARY

Master's student in Computer Science / Artificial Intelligence with hands-on experience in computer vision, deep learning, and full-stack software development through academic and personal projects. Proficient in **Python, PyTorch, OpenCV and C++**, with practical exposure to model training and image processing. Seeking a **6-month internship** (Computer Vision / Deep Learning) starting February 2027 to apply technical skills to real-world impactful engineering problems.

EDUCATION

Master's Degree in Computer Vision and Intelligent Systems *September 2025 - Present*

University Paris Cité, Paris, France

- Relevant coursework: **Deep Learning, Computer Vision, Pattern Recognition, Data Science, Signal Processing, 3D imaging, Linear Algebra & Statistics**
- Key skills developed: **PyTorch model training and evaluation, Vision Transformers (ViT, DINO), CNN architectures, classical computer vision (SIFT, homography, segmentation), object detection with YOLO**

Double Bachelor's Degree in Computer Science and Japanese Studies *September 2022 - June 2025*

University Paris Cité, Paris, France

PROJECTS

Tumor Detection in Whole Slide Images (WSI) *Jan 2026 - May 2026*

- Built a complete pipeline to detect tumors in high resolution medical images without pixel-level annotations.
- Cut compute time by treating the WSI as a 1D sequence.
- Achieved a recall score of 0.91 for tumors.

Distributed Event Management Web Application (Django + React) *Mar 2026 – Apr 2026*

- Developed a full-stack event-management platform with role-based authentication and permissions using Django REST Framework and React for the frontend.
- Containerized the application with Docker using a microservice architecture.

Coin Classification *Feb 2026 - Mar 2026*

- Developed a classical image-processing pipeline for object detection and classification, with no deep learning models.
- Delivered a lightweight, interpretable low-level approach with no dependency on heavy models.

Information Retrieval Engine *Feb 2026 - Apr 2026*

- Designed a hybrid search engine combining lexical (TF-IDF, BM25) and semantic (embeddings) retrieval.
- Benchmarked the system in a Kaggle competition in teams of 4 (ranked 7^{th} out of 19 teams).

SKILLS

Languages**: Python, C++, JavaScript, SQL, LaTeX**

Frameworks & Libraries: **PyTorch, TensorFlow, OpenCV, Django, React, NumPy, Pandas, scikit-learn**

Tools & Platforms: **Docker, Kubernetes, Git/GitHub, Jupyter, PostgreSQL,**

Languages Spoken: **French** (Native), **English** (Fluent), **Japanese** (Intermediate)
